### 1 Problem

Let V be a vector space over the field of complex numbers and suppose there is an isomorphism T of V onto  $C^3$ . Let  $\alpha_1$ ,  $\alpha_2$ ,  $\alpha_3$  and  $\alpha_4$  be the vectors in V such that:

$$T\alpha_1 = \begin{pmatrix} 1\\0\\i \end{pmatrix} \tag{1.0.1}$$

$$T\alpha_2 = \begin{pmatrix} -2\\1+i\\0 \end{pmatrix} \tag{1.0.2}$$

$$T\alpha_3 = \begin{pmatrix} -1\\1\\1 \end{pmatrix} \tag{1.0.3}$$

$$T\alpha_4 = \begin{pmatrix} \sqrt{2} \\ i \\ 3 \end{pmatrix} \tag{1.0.4}$$

Find a basis for the subspace of V spanned by the 4 vectors  $\alpha_i$ .

## 2 EXPLANATION

V is a vector space and V is isomorphic to  $C^3$  via isomorphism T which implies that  $C^3$  is also isomorphic to V via isomorphism  $T^{-1}$ .

As V is isomorphic to  $C^3$ , so

$$dim(V) = dim(C^3) = 3$$
 (2.0.1)

Now.

$$\begin{pmatrix}
1 & 0 & i \\
-2 & 1+i & 0 \\
-1 & 1 & 1 \\
\sqrt{2} & i & 3
\end{pmatrix}
\xrightarrow{R_3 \leftarrow R_3 + R_1}
\begin{pmatrix}
1 & 0 & i \\
-2 & 1+i & 0 \\
0 & 1 & 1+i \\
2 & i\sqrt{2} & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_4 \leftarrow R_4 + R_2}
\begin{pmatrix}
1 & 0 & i \\
-2 & 1+i & 0 \\
0 & 1 & 1+i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_2 \leftarrow R_2 + 2R_1}
\begin{pmatrix}
1 & 0 & i \\
0 & 1+i & 2i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_3 \leftarrow (1+i)R_3}
\begin{pmatrix}
1 & 0 & i \\
0 & 1+i & 2i \\
0 & 1+i & 2i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_3 \leftarrow R_3 - R_2}
\begin{pmatrix}
1 & 0 & i \\
0 & 1+i & 2i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_3 \leftarrow R_3 - R_2}
\begin{pmatrix}
1 & 0 & i \\
0 & 1+i & 2i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_3 \leftarrow R_3 - R_2}
\begin{pmatrix}
1 & 0 & i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_3 \leftarrow R_3 - R_2}
\begin{pmatrix}
1 & 0 & i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_3 \leftarrow R_3 - R_2}
\begin{pmatrix}
1 & 0 & i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_3 \leftarrow R_3 - R_2}
\begin{pmatrix}
1 & 0 & i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_3 \leftarrow R_3 - R_2}
\begin{pmatrix}
1 & 0 & i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

$$\xrightarrow{R_3 \leftarrow R_3 - R_2}
\begin{pmatrix}
1 & 0 & i \\
0 & 1+i(1+\sqrt{2}) & 3\sqrt{2}
\end{pmatrix}$$

From here we can get that  $T\alpha_3$  is dependent vector while  $T\alpha_1$ ,  $T\alpha_2$  and  $T\alpha_4$  are independent vector. These  $T\alpha_1$ ,  $T\alpha_2$  and  $T\alpha_4$  also span the vector space  $C^3$ , so these 3 vectors are the basis of  $C^3$ .

As dim(V) = 3, so it must have 3 basis and as V and  $C^3$  are isomorphic so  $\alpha_1$ ,  $\alpha_2$  and  $\alpha_4$  are the basis of V.
